

The Aberdeen Carolina & Western Railway offers railcar transloading services for those looking to serve markets from central North Carolina. We have strategic partnerships with trucking companies for transloading from rail to truck/truck as well as multiple transloading locations along our 150 mile rail corridor. Our central location allows customers to reach multiple markets in North and South Carolina as well as strategic access to ports in the Southeast. We are a dual served short line railroad connecting with both Norfolk Southern and CSX.
